DETAILED ACTION

1. Claims 1-13 are pending in this application.

Election/Restrictions

2. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1 and 10-13, drawn to providing session protection for user privacy over a network, classified in class 713, subclass 153.
 - II. Claims 2-9, drawn to providing private storage of data within a network, classified in class 713, subclass 193.
3. The inventions are distinct, each from the other because of the following reasons:
4. Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct if they are shown to be separately usable. The following case instantiates:

Invention I, discloses a method of providing session protection for user privacy over a network without the features of invention II.

Invention II, discloses a method of providing private storage of data within a network without the features of invention I.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

The examiner has required restriction between subcombinations usable together. Where applicant elects a subcombination and claims thereto are subsequently found

allowable, any claim(s) depending from or otherwise requiring all the limitations of the allowable subcombination will be examined for patentability in accordance with 37 CFR 1.104. See MPEP § 821.04(a). Applicant is advised that if any claim presented in a continuation or divisional application is anticipated by, or includes all the limitations of, a claim that is allowable in the present application, such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application.
